EHR Release Notes: May 30, 2024

Completed Initiative	Release Note
Create a report for clients who were created in a time frame that don't have a TADT form - Inquiries Only	This report is meant to be run by county administrative staff to determine which new clients who have an inquiry were never associated with a program and therefore have never started a TADT document. This is recommended to be run at an administrative level in order to see all new clients across a county's system. In this case, new clients means an individual who recently received a Client ID in SmartCare.
TADT Human Readable Report	This is a report that provides timeliness data based on the TADT documents but produces a report that's more human-readable, with more information and limited by program.
