

EHR Release Notes: June 26, 2025

Completed Initiative	Release Note
Update NOABD Termination and NOABD Timely Access letters	<p>The county noted that the recently updated NOABD templates per BHIN 25-015 need additional modifications to the language. Specifically the NOABD - Termination (Client) and the NOABD - Timely Access (Client) letter templates are reflecting language of "Plan" where it should state "County".</p>
Scanning types - only allow "Client (Medical Record)" to be an option	<p>We have removed the scanning type options for all except "Client (Medical Record)". This was in progress for a long time and we apologize for not completing this sooner. If you are finding that you are needing any other scanning type options, you can grant permissions to the corresponding "Image Association" permission. The "Provider" Image Association permission will continue to be associated to CalMHSA MCO roles, per Streamline's recommended setup. We will be removing all other options (aside from Client (Medical Record) and Provider) from non-sys admin user roles. Please reach out to Help Desk if you are having any issues. This should address the concern of scanning documents not associated with a client's chart, which results in the documents "disappearing".</p>
Add 'Shift Summary' to LPCC Trainee	<p>SD LPCC Trainees reported not being able to select Shift Summary when completing services.</p>
