Add/delete items at scale (example: figure out a way to quickly add more than 1 staff/user to a new program)	Right now when creating a new program, you can't add staff to the program in the program set-up. You have to go to each staff/user profile and add the new program manually. This is very tedious and time consuming. There are numerous other examples of not being able to work at scale. This includes being able to add multiple programs to a user's account at once but having to remove programs one at a time. We're trying to make these types of processes more user-friendly and efficient. This is on Streamline's roadmap for 2026.	SysAdmin/System Level	8
12. Reviewer Process [INTERNAL] 33041	This is the process in which documents must first be reviewed by a supervisor before being marked complete in the system. This includes the Resident/Attending process. This also includes a service not billing until the Reviewer has signed.	Medical	5
